

Aurical® Freefit

Your way to
fitting excellence

natus.

The Probe Microphone Measurement unit

Wireless and binaural

Wireless design: It's easy to fit for you and comfortable to wear for the client.

User friendly probe: The integrated rulers make it simple to insert the probe tube correctly.

Verification has never been easier

When you program a new hearing instrument, chances are you're fitting to an average ear and not to your client's own ear. We think there is a better approach. Verification using Probe Microphone Measurements (PMM) encompasses virtually any measurement taken in the ear using a probe microphone including REM, Speech Mapping and more. PMM is often thought to be difficult, time-consuming or appropriate only for especially challenging cases. With Aurical® Freefit, this isn't the case at all. We integrated it into the Otosuite® software platform and we've designed it so that it will blend nicely into the way you work. Freefit enables you to work with PMM every day, and on every client in your clinic to maximize customer satisfaction.

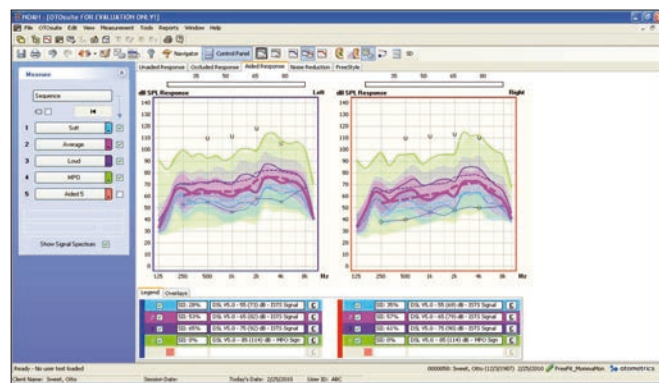

Also, integrated verification with IMC2 is the ultimate in usability. An easy workflow combining HI programming and PMM saves time and gives more focus on your patients.

THE FACTS

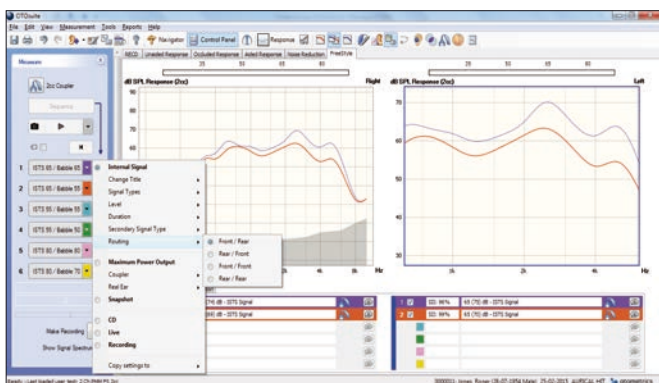

- Wireless and binaural
- Real Speech stimuli including ISTS
- Dynamic Fitting using percentile analysis
- Chirp and OpenREM calibration
- FitAssist tools
- Configurable user tests and sequencing
- FreeStyle with Feature-2-Benefit mode
- 2-channel stimulus in FreeStyle
- Dedicated noise reduction testing
- Tinnitus markers
- Extensive sound library
- Custom target and custom stimuli
- ABR/ASSR data conversion
- Listen at the eardrum
- IMC2 ready

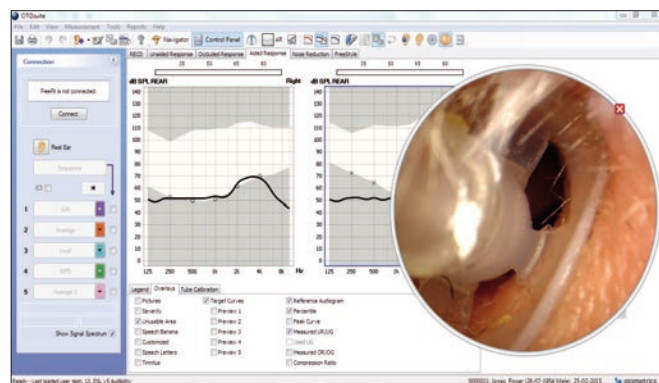

FitAssist tool: OnTarget™ in OnTarget mode.

Dynamic signal analysis, Percentile Analysis.

2-channel FreeStyle and Curve Zoom.

QuickView used for inspecting openness of the fit.

Make time work for you

Freefit PMM helps you to serve and satisfy more clients. With Aurical Freefit, you can verify fittings and achieve a more accurate fit at the first visit. The PMM module lets you combine traditional REM functionality with speech stimuli and dynamic verification using modern speech signals such as ISTS and real speech passages to achieve more “real world” conditions. The FitAssist tools provide immediate and convenient support throughout the fitting process. They include the ProbeTube Assistant™, Occluded Probe-Tube Detector, Feedback Finder, Sequencing, OnTarget and QuickView for instant access to your video otoscope.

In short, Freefit lets you fit efficiently with confidence – and makes your clients feel confident about you. Add in binaural measurements, and you get a far smoother and more comfortable fitting session. Freefit streamlines your workflow, so you can deliver more without slowing you down.

Experience the freedom to work your way

Freefit is the only wireless Probe Microphone Measurement solution, adding unprecedented flexibility to PMM. OpenREM supports open fittings. You can verify fittings against NAL

and DSL prescriptive targets. Or, you can incorporate your own targets and stimuli to suit the way you work. Otosuite® software is intuitive and easy to customize, and make Freefit fast and easy to use. User Tests and pre-defined measurement sequences are easily adapted to local standards and protocols. The FreeStyle functionality allows for a completely flexible approach including verification of tinnitus devices and displaying the compression ratio of the HI processing. Use Freefit separately, or combine it with the Aurical audiometer and/or the Aurical HIT chamber.

Better evaluation of hearing instrument technology

Freefit includes FreeStyle with the two-channel stimulus mode and the unique Feature2Benefit mode. You can demonstrate hearing instrument benefits, such as noise reduction, directionality and other features using one or two independent signals from one or two loudspeakers. It's also possible to add stimuli and to define more protocols to evaluate new features as they reach the market.

The Aurical family

Fully integrated with Otosuite

The Otosuite® software integrates all the elements of Aurical®. It's intuitive, easy-to-learn and easy-to-use. It supports the entire patient journey, from diagnostics and counseling to fitting and verification. User-friendly functionality ensures configurable, consistent and smooth workflows that can be customized to suit individual needs, and you work in a single software environment across modules. The result is a better fitting experience – for you and for your patient.

About Natus

A leader in hearing and balance products and solutions, Otometrics was acquired in 2017, and is now known as Natus. For almost 60 years, we have been helping clinicians improve the quality of life for their clients and patients by delivering expert knowledge, reliable solutions and services and trusted partnerships. We continue to develop, manufacture and market audiological, otoneurologic and vestibular instrumentation in more than 80 countries under trusted brand names, including Madsen®, Aurical®, ICS®, Otoscan® and Bio-logic®. Natus Medical Incorporated is the global brand clinicians depend on when diagnosing and treating disorders of the central nervous and sensory systems to improve patient outcomes.
